

# RULES TO LIVE BY

Failure to read and understand your machine's operator's manual could result in personal injury or equipment damage.

## Life saving tips for the farm

**Click-it, in case you flip it.** If your machine is equipped with a fixed roll over protective structure (ROPS) the seat belt should be used at all times.

If your machine is equipped with a foldable ROPS, keep it in the fully extended and locked position whenever possible and use the seat belt. Do NOT fasten the seat belt if the ROPS is in the folded position.

**Prevent runovers.** Never by-pass start the engine. Always start machine from the seat.

**Giving rides can take lives.** Don't give in to peer pressure. Just say "no".

**Shut it off before getting off.** Always place machine in park position, disengage PTO, lower implements to the ground, and turn off the engine before leaving the operator's station.

**Ballast for balance.** Ensure your equipment has the required weight to keep power to the ground and maintain stability with implements.

**Turn lights on.** Make sure lights are on and markings are clean and visible while operating on roads.

**Prevent fires.** Keep the machine free of debris during and after each use.

**Minimize entanglement endangerment.** Keep guards and shields in place and safety devices working.
